We are Embedded4You

The leading network of expertise in the embedded sector

cooperative - personalised - professional

www.embedded4you.com

We are Embedded4You

Guided by this principle, our member companies are able to deliver embedded solutions to their customers much more efficiently and quickly. This approach has proven its worth since the E4You business association was founded in 2007.

Embedded4You e.V. is the leading network of expertise in embedded technologies and facilitates the development of efficient solutions through collaboration.

cooperative - personalised - professional

How does that work?

Small and medium-sized enterprises collaborate within E4You r.a. By pooling their expertise and technologies in joint projects, they achieve greater success than they would individually.

Every company in the E4You network possesses outstanding, in-depth industry knowledge and many years of project experience. The very close collaboration and constant exchange of knowledge lead to higher product quality, greater flexibility and increased customer satisfaction.

The collaborative, trust-based dialogue within E4You with business leaders and experienced professionals, as well as the opportunity to use members' services and products to supplement or enhance my own skills, is a key factor in my day-to-day business activities.

Vera Gebardt, Head of the Main Branch at tecmata GmbH, member since 2013

How to get to Embedded4You

Make the most of our network or join us

Our success story lies in pooling expertise by bringing together the best in their respective fields under one umbrella organisation. The secret behind this is a unique, partnership-based collaboration that has been in place since 2007, as reflected in the large number of client projects we have carried out together.

Services provided by the association for its members

- A collaborative platform for developing new services and products
- A platform for sharing information on marketing, sales, projects and products
- Easier access to the technologies and resources of association members
- Organisation of joint, public and internal events
- Joint participation in various trade fairs and conferences
- Organisation and coordination of research and funding projects

Contributions made by members to the association

- Demonstrating and contributing your own expertise and ideas, e.g. through collaborations with member companies and by actively helping to shape E4You projects.
- Support for joint marketing and sales campaigns
- Active engagement in addressing enquiries and social media campaigns
- Hosting internal and external events
- Cost sharing through membership fees or as trade fair participants
- Taking on association tasks to increase awareness and visibility

During weekly online meetings and regular face-to-face meetings throughout the year, a wide range of topics relating to corporate governance are discussed alongside specific projects. In accordance with the E4You Code of Ethics, these discussions are always confidential, allowing even sensitive aspects of day-to-day management and leadership to be openly discussed.

Key areas of focus and expertise

- Testing & Validation
- Modelling & Simulation
- Automation & Internet of Things
- Implementation & Integration
- Security & Safety
- Management & Corporate Governance
- Research & Funding
- Digitalisation & Artificial Intelligence
- Further Education & Training

Embedded systems now constitute a market segment in their own right. They are one of the most important cross-cutting technologies of the 21st century. However, as they operate behind the scenes, the significance of this technology is still underestimated in political circles and by the general public.

Dr. Bernhard Rohleder,
Chief Executive of BITKOM

In addition to collaborative project work, Embedded4You r.a. is committed to highlighting to the general public the particular importance of these cross-cutting technologies for our industries.

Dr. Werner Altmann,
Chairman of the board E4You r.a.
